- x The pages are numbered and none should be removed. The numbered pages each have space for the date, which should always be used, and for signatures, for use when the data are reviewed.
- 7. If an alternative form of noteboois used, for example for short projects, the above elements should be incorporated so far as is reasonable.

2) Supplementary physical data files

Other stores of physical data could take a variety of forms. This could include additional notebooks, ring binders or stores of loosleaf documents. They could also vary in scope. Many will cover the work of individuals or research groups. Some, however, might be used by whole departments or even the entire College. In all cases, they should be assessed as fit for purpose by the project leader or Head of Department as appropriate. Any physical data file should maintain the principles that the information is clear, accurate and traceable. To meet this need, documents should be uniquely identified. Sequentlaldabe recommended as these clearly identify any gaps in the record.

3) Electronic data

Research samples often require more comprehensive labelling. The level of detail arodinate cording will be determined by the project leader. This determination should consider all experimental and statutory requirements. Often unique identifiers should be used to unambiguously identify the sample.

In cases where the storage or handlings \mathbf{a} mples or reagents has specific requirements, these should be clearly recorded. If there i
